Dear Hiring manager,

I am excited to apply for the Software Engineer (Trading) role at Phantom. As a software engineer with six years of experience building automated trading systems, blockchain tools, and high-performance backend services, I am deeply aligned with Phantom's mission to create a seamless, multi-chain wallet experience for millions of users.

I have spent the last several years building systems that sit directly at the intersection of trading, automation, and blockchain infrastructure. My work includes developing multiple trading bots, optimizing execution speed on Solana transactions up to 2 million lamports, and improving reliability in live trading environments. As a member of the Solana Superteam, I have gained a strong understanding of Solana's architecture, RPC behavior, validator interactions, and transaction pipelines.

What excites me most about this role is the opportunity to build the systems that power Phantom's trading experience. I have deep experience working with APIs, data pipelines, liquidity detection, and low-latency execution—skills that directly map to integrating trading protocols, aggregators, and new trade types within Phantom.

I am inspired by Phantom's vision to make crypto accessible, secure, and unified across chains. I would be thrilled to contribute to building the next generation of trading surfaces, supporting new blockchains, and helping shape the wallet experience for the next wave of users entering the Web3 ecosystem.

Thank you for considering my application. I look forward to the opportunity to contribute to your mission. Sincerely,

Andrew Ewuola
